

Calculator Algorithm

Step 1: Navigate to Eclipse Editor and create 2 classes named Test and Calc.

Step 2: Inside Class Calc, define methods of add, sub, mul and div to perform its respective operations.

Step 3: Inside Test Class instantiate a class and by using a switch control statement we can perform the required operation.

Step 4: In the output bar, enter the 2 values of a and b and enter the operator that has to be performed and verify the desired output is attained or not.

Step 5: Exit navigator once operations are finished.
