Algorithm

Step 1: open the eclipse editor

Step 2: I am going to handle the data as Adding, viewing all the data, Append the data

To do all these operations we are storing the entire data in a "Documents".

Step 3: I used if/else condition for file is created or not.

Step 4: I have given scanner for user need to give the input for adding the data into the file.

Step 5: readFileInList is used to read the data in the created file and append is used adding

The extra data or information into the file.
